Founder profile

I am a 21-year-old founder building adaptive interfaces for the AI-native web. At Froncort AI, I went from intern to Product Manager in 12 months by learning regulatory science, TB epidemiology, and healthcare AI deeply enough to ship production systems. At Mirage, I am applying the same pattern to browser interfaces, instead of accepting websites designed for the average user, people should be able to reshape the web around how they actually work.

FOUNDER WORK

Mirage - Co-Founder

Adaptive browser interfaces | Working demos live | MVP in progress | 3 co-founders | Thesis: reshape the internet around you

- Building adaptive browser interfaces that let users reshape any website around their own workflow instead of accepting interfaces designed for the average user.
- Why now: recent advances in AI agents make it possible to personalize interfaces around intent and context rather than forcing users to adapt to fixed layouts.
- Product proof: deterministic browser-extension demos across live websites, a **400-person waitlist**, and **800 Instagram followers** before public MVP launch.
- Tested founder-led distribution through product demos and short-form content, including a post that reached **600K views**.
- Mirage was accepted into the **16VC Summer Founder Fellowship**. Currently converting demos and demand into the MVP.
- Produced all demos, launch videos, and social content solo using AI-native production workflows, zero external hires, zero waiting.

WORK EXPERIENCE

Froncort AI - Lead Engineer & Product Manager

Mar 2025 - Present | Intern -> Lead Engineer -> Product Manager in 12 months | Leading 9 engineers while in college

- Joined as an intern, became Lead Engineer in 3 months, then Product Manager within 12 months. Now lead **9 engineers** across regulatory AI, public health AI, and consumer health AI.
- Led RegDoc: FDA and EU-MDR aligned regulatory AI that generates compliance-ready regulatory documents in a few minutes.
- Led AI NETRA: AI and geospatial inferencing platform for TB outbreak prediction and diagnostic allocation, built with FIND, supported by Google.org, validated with government TB program officials, demoed at India AI Impact Summit 2026.
- AI NETRA reduced screening effort by **55.2%** and costs by **54.8%**.
- Forward-deployed for RegDoc: led enterprise client calls and converted regulatory expert workflows into architecture.
- Rebuilt report generation to adapt dynamically to any drug/device, eliminating manual template creation for domain experts.
- Built cloud and DevOps infrastructure across AWS, Terraform, GitHub Actions, and isolated client deployments.
- Recovered and reduced cloud spend by approximately **$6K**.

SELECTED EXPERIMENTS

- Self-funded a TechSparks trip at 19 using hackathon winnings.
- Wrote a 25 point mistake audit for Froncort. The purpose was simple: doubt is data, and critical questions should be documented before they disappear.
- Built @sid.breaks.prod from zero to 1,000 followers in 6 weeks to test whether founder-led distribution compounds.

Selected builds

RegDoc - Automated Regulatory Documentation

- Built FDA and EU-MDR aligned domain agents for regulatory documentation, replacing static templates with drug/device-specific orchestration.
- Designed the backend architecture, retrieval and knowledge-base flow, report-generation pipeline, and guardrails for enterprise client use.
- Reduced compliance-document generation to a few minutes and removed manual template creation for domain experts.

AI NETRA - TB Outbreak Prediction Platform

- Built an agentic AI and geospatial inference system for TB outbreak prediction and diagnostic allocation with FIND, supported by Google.org.
- Designed outputs for public-health decision makers: where to screen, where to allocate diagnostics, and which interventions to prioritize.
- Validated with government TB program officials. Reduced screening effort by **55.2%** and costs by **54.8%**. Demoed at India AI Impact Summit 2026.

MercuryAI - Enterprise Knowledge Platform

1st Place, IIT Bombay TechFest AI Quest Hackathon, Dec 2024

- Built multi-source RAG across docs, repos, and wikis to make enterprise knowledge searchable across silos. Recognized by Marsh McLennan leadership.

Demo: youtube.com/watch?v=l1pXpls1Vro

Urban Eye AI - Real-Time City Event Detection

2nd Place, Cummins IndoVateAI Hackathon, Mar 2025

- Built edge/CCTV event detection for riots, traffic jams, and illegal dumping so city teams could respond in minutes instead of hours.

GitHub: github.com/urban-eye-ai/Hub-Backend

Other builds

- Oasis: campus social network built from scratch, **1,200+ organic users** with zero paid marketing.
- EDC Steal or Share: Prisoner's Dilemma-inspired multiplayer game supporting **200+ concurrent users**.

RECOGNITION

- Mirage accepted into the 16VC Summer Founder Fellowship.
- AI NETRA demoed at India AI Impact Summit 2026.
- 1st Place, IIT Bombay TechFest AI Quest 2024. Winner of 3 hackathons total.
- Represented Froncort AI at YC Startup School Bangalore.

CORE TECHNOLOGIES

AI Agents | Browser Extensions | Full-stack Systems | Microservices | DevOps | Distributed Infrastructure | AWS | LangGraph | Python | TypeScript | React

CURRENT FOCUS

How interfaces change when execution becomes cheap and clarity becomes the scarce resource: browsers that understand intent, inspect live web state, and reshape software around the user without taking control away from them.
